

Uniden EXP 371 Battery Replacement

This guide will focus on the replacement of the battery.

Written By: Eric Rodrigues

INTRODUCTION

Before you attempt to replace the battery you should first check the troubleshooting guide to ensure you need a battery replacement.

Step 1 — Battery Cover

- To remove the battery cover, push in and downwards towards yourself on the cover. There is a notch on the back that you can use to get a better grip if necessary.

Step 2

- Pull the battery away from the battery housing. At the end of the wires on the housing side there is a clip that connects the battery to the phone. Unplug this clip and discard the worn battery appropriately.

Step 3

- Now take your new battery pack and insert the new plug into the housing. The plug should smoothly clip right into the phone.
- *If the clip does not fit easily into the housing, compare the new battery with the old and be sure they are the same.*

Step 4 — Replace Battery

- Push the wires back into the housing to allow the battery to fit under the battery cover.
- Put the cover back on. Listen for a click, which will indicate the cover is placed correctly.

To reassemble your device, follow these instructions in reverse order.
